

## Shopping online – paying offline!

### Dear Paysafecash payment point,

Paysafecash enables your customers to pay safely and easily for online purchases. With Paysafecash, a product or service can be ordered online and then paid for directly in cash here in your Paysafecash payment point by scanning a QR/barcode.

### The processing of Paysafecash payments is extremely simple

The customer shows a QR/barcode and wants to pay the amount due in your payment point.

#### 1 Scan the QR/barcode

Select Paysafecash on your POS terminal using the menu item among the familiar prepaid products (such as phone cards, vouchers or other means of payment) and scan the customer's QR/barcode or enter the corresponding number under the QR/barcode manually.

#### 2 Confirm payment

Your POS terminal shows you the amount to be paid by the customer. After the customer has paid the amount due, you confirm the payment on your POS terminal and give the payment receipt to the customer. That's it!
